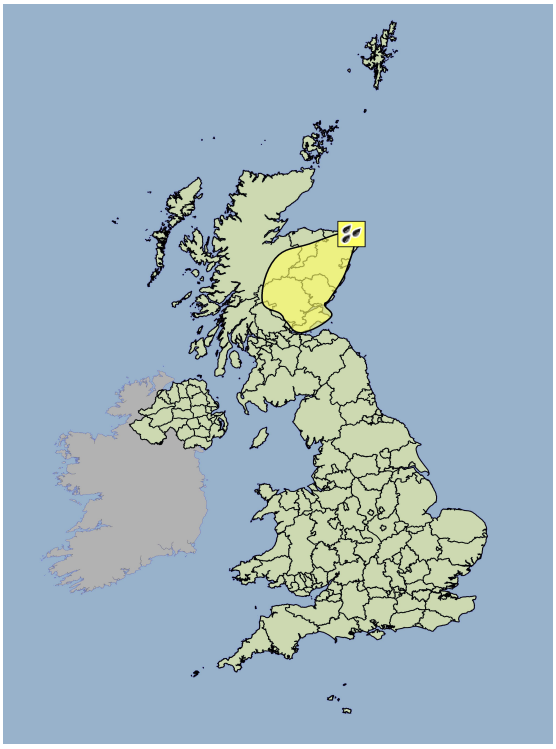
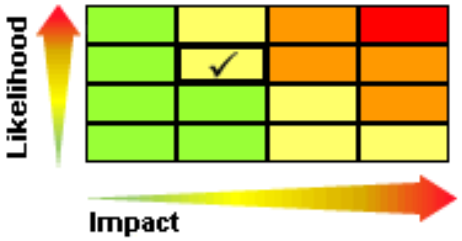
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A series of weather fronts will move north across Scotland, bringing a fairly persistent spell of rain to parts of eastern Scotland. The developing strong easterly winds will mean that higher ground within this area will see some heavy rainfall, with the possibility of some flooding during Saturday.

Additionally some snowfall is expected, mainly above about 300m, with several cm on roads above 450m.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Sat, 26th Dec 2015** until **22:00 on Sat, 26th Dec 2015**

Outbreaks of rain will turn heavy at times and will last until late Saturday evening, before easing in intensity. Before this happens, rain will be persistent, and heaviest across the hillier regions of Aberdeenshire and Angus. Additionally rain will turn to snow over high ground, with several cm accumulating at the level of the highest road passes.

Please be aware of the potential for some localised disruption to travel, either from flooding or from upland snowfall.
